

Construction & Industrial Products

| Product | Application |
|---|---|
| Akasil 10TS | A silicone defoamer commonly used for various industrial purposes and paints. |
| Gum Rosin (X, WW) | Used for the manufacture of synthetic resins, glues and adhesives, paints and varnishes, mortar and concrete. |
| HPMC | An additive used in construction dry mix and paint formulations to improve workability, water retention, and consistency of the product. |
| Matting Agent (TSA 500L) | Matting agents are incorporated into coatings, paints, and varnishes for improved physical and chemical properties. |
| MPH 100 | A PH-Stabilizer used in water-based paint to replace ammonia. |
| MPH 500 | A pressure sensitive type of acrylic copolymer used in the manufacturing process of adhesives, as well as in floor primers. |
| Opaque Polymer (SHP 60, 40; OPKORM30) | Used as additives in paint and coating formulations to help with opacity, shine, brightness, and scattering to supplement TiO ₂ . |
| Pigments (Various) | Range of colorants for plastics, paints and coatings for enhanced aesthetics and UV resistance. |
| Pure Acrylic Resin (SM 704) | Used for high-quality industrial and architectural coatings to improve weather resistance, adhesion, and durability of the finished product. |
| RDP (04; 05) | Vital additive in construction & industrial, enhancing flexibility and adhesion; wall putty mortar. |
| Refined Glycerin | Used in resins polymerization and plastics. |
| Silanil 258 | A polymer additive which acts as an adhesion promoter, crosslinker and coupling agent. |
| Silicon Oil (100CST) | Primarily used as lubricants, thermic fluid oils or hydraulic fluids due to the wide service temperature range, low viscosity variance at high temperatures and high dielectric strength. |
| TPA | Crucial component in the production of polyester resins used in various construction and industrial applications as well as vehicle refinish, marine & protection. |
